

THE UNITED STATES OF AMERICA

TO ALL TO WHOM THOSE PRESENTS SHALL COMD:

Rutgers, The State University of New Iersey

MICCOLS, THERE HAS BEEN PRESENTED TO THE

Secretary of Agriculture

AN APPLICATION REQUESTING A CERTIFICATE OF PROTECTION FOR AN ALLEGED DISTINCT VARIETY OF SEXUALLY REPRODUCED, OR TUBER PROPAGATED PLANT, THE NAME AND DESCRIPTION OF WHICH ARE CONTAINED IN THE APPLICATION AND EXHIBITS, A COPY OF WHICH IS HEREUNTO ANNEXED AND MADE A PART HEREOF, AND THE VARIOUS REQUIREMENTS OF LAW IN SUCH CASES MADE AND PROVIDED HAVE BEEN COMPLIED WITH, AND THE TITLE THERETO IS, FROM THE RECORDS OF THE PLANT VARIETY PROTECTION OFFICE, IN THE APPLICANT(S) INDICATED IN THE SAID COPY, AND WHEREAS, UPON DUE EXAMINATION MADE, THE SAID APPLICANT(S) IS (ARE) ADJUDGED TO BE ENTITLED TO A CERTIFICATE OF PLANT VARIETY PROTECTION UNDER THE LAW.

MGW, THEREFORE, THIS CERTIFICATE OF PLANT VARIETY PROTECTION IS TO GRANT UNTO THE SAID APPLICANT(S) AND THE SUCCESSORS, HEIRS OR ASSIGNS OF THE SAID APPLICANT(S) FOR THE TERM OF TWENTY SEARS FROM THE DATE OF THIS GRANT, SUBJECT TO THE PAYMENT OF THE REQUIRED FEES AND PERIODIC REPLEMISHMENT OF VIABLE BASIC SEED OF THE VARIETY IN A PUBLIC REPOSITORY AS PROVIDED BY LAW, THE CHIETO EXCLUDE OTHERS FROM SELLING THE VARIETY, OR OFFERING IT FOR SALE, OR REPRODUCING IT, OR UNG IT, OR EXPORTING IT, OR CONDITIONING IT FOR PROPAGATION, OR STOCKING IT FOR ANY OF THE URPOSES, OR USING IT IN PRODUCING A HYBRID OR DIFFERENT VARIETY THEREFROM, TO THE EXTENT BY THE PLANT VARIETY PROTECTION ACT. IN THE UNITED STATES SEED OF THIS VARIETY (1) S. OLD BY VARIETY NAME ONLY AS A CLASS OF CERTIFIED SEED AND (2) SHALL CONFORM TO THE NUMB.

WERATIONS SPECIFIED BY THE OWNER OF THE RIGHTS. (84 STAT. 1542, AS AMENDED, 7 U.S.C. 2321

FESCUE, HARD

'Firefly'

In Testimony Thereof, I have hereunto set my hand and caused the seal of the Hunt Institute Protection Office to be affixed at the City of Washington, D.C. this seventh day of Tebruary, in the year two thousand and eight.

Attest:

Exhibit A:

Origin and Breeding History Firefly Hard Fescue

1. Firefly hard fescue (*Festuca longifolia* Thluill.) is an advanced generation synthetic cultivar selected from the maternal progenies of 39 clones. Three closely related clones served as additional pollen sources. Firefly was developed for improved seed yield performance, dark bright green color, freedom from summer patch disease (caused by the fungus *Magnaporthae poae* Landschoot & Jackson) and medium maturity. One hundred percent of the parental germplasm in Firefly contain endophyte (*Epichloe festucae* [Schardle]). Approximately eight percent of their parental germplasm trace to a plant selected from Old Bridge Cemetery, in Old Bridge, NJ. Approximately 72 percent trace to plants selected from or related to the cultivar Reliant (Duell, et al., 1983). The other 20 percent trace to selections from old low maintenance turfs of the eastern United States.

The breeding method used in the development of Firefly hard fescue was a population improvement program involving the evaluation of collected germplasm followed by cycles of recurrent phenotypic and genotypic selection. The population improvement program was initiated in 1968 at Rutgers University to improve pest resistance, stress tolerance, attractiveness, turf performance, seed yield and the ability to provide an acceptable turf cover without the need for supplemental fertilization or irrigation. The breeding program included extensive germplasm collection and evaluation of the most promising genetic material from old turfs. Most of the promising selections were made in old cemeteries in northern and central NJ; Atlanta, GA and Baltimore, MD; golf course roughs in NJ and NY and lawns of Cook, Douglas and Rutgers Colleges of Rutgers University, New Brunsweick, NJ. The breeding program also included: intercrossing the most attractive plants, screening their progenies (over 50,000) for resistance to powdery mildew (Erysiphe graminis DC), leaf spot (Dreschlera dictyoides Shoemaker) and an attractive turf-type growth habit under greenhouse conditions, evaluating these selected seedlings (over 12,000 individuals) in isolated spacedplants from these nurseries at either Adelphia or North Brunswick, NJ, removing the least attractive plants from these nurseries prior to anthesis, harvesting seed from the most attractive pest resistant plants with the best floret fertility, seeding over 1,000 single-plant progenies in closely mowed turf trials, selecting attractive plants from the best performing progenies which contained endophyte, and repeating the above procedures in a continuing population improvement program to produce Firefly hard fescue.

Following varying cycles of phenotypic and genotypic selection for characteristics such as

dark green color, high shoot density, early seed maturity and freedom from disease, two turf trials were established in the fall of 1995 and 1996. The one established in 1995 contained 150 single-plot progenies and the one established in 1996 contained 175 single-plot progenies. Following five years of plant competition, mowing, and environmental stresses such as drought and summer patch disease, the five best performing turf plots from both the 1995 and 1996 turf trials were selected. One nursery was established in the spring of 2000, which contained 1,800 plants from the progeny of five clones from the 1995 turf trial. This nursery was retained through 2002. A second nursery was established in the spring of 2001, which contained 600 plants from the progeny of five cones from the 1996 turf trial. During the spring of 2002, five plants were chosen from the 200 nursery and 37 plants were chosen from the 2001 nursery for dark bright green color, high shoot density, medium seed maturity and freedom from disease. These selected plants were moved, prior to anthesis, to an isolated crossing block at Adelphia, NJ. Thirty-nine plants from the six different maternal lines were harvested with excellent floret fertility and freedom from disease. In the fall of 2002, one turf plot of each line was established at Adelphia and 1 gram of each line was sent to Advanta Seeds Pacific for increase and further nursery evaluation.

In the fall of 2002 an increase block of Firefly was established containing 60 plants of each progeny line, for a total of 2,220 plants. In 2003 negative mass selection was used and 0.2% of the plants were rogued from the population. The remaining plants were harvested in bulk and designated 'Firefly' breeder seed. Breeder seed was used to establish a morphological nursery for Plant Variety Protection (PVP) measurements.

Reference

Duel, R.W., R. H. Hurley, F. B. Ledeboer, and C. R. Funk. 1983 Reliant Hard Fescue. Crop Sci. 23(5): 1011 - 1012

2. Breeder Seed Maintenance:

A breeder seed multiplication was planted in isolation in 2002 in Albany, Oregon. Seed was harvested in bulk in 2003 and is maintained in cold storage. Seed propagation is limited to three generations, one each of foundation, registered, and certified.

3. Stability and Uniformity:

Firefly has been a stable uniform cultivar over 2 generations. No off-type or variant plants have been observed during the multiplication or reproduction. During the breeder seed multiplication 0.2% of the plants were removed. These types were not observed during the subsequent generations. Turf plots of Firefly have been uniform and stable.

(BI:10/18/2007)

Exhibit B:

Novelty Statement of Firefly Hard Fescue

The following summary outlines the distinctive characteristics of Firefly. The novelty of Firefly is based on the unique combination of these characteristics. Firefly is most similar to Scaldis, but may be differentiated by using the following criteria:

- 1) The heading date and anthesis date of Firefly is later than Scaldis (tables 1A, 1B).
- 2) Firefly has a mature plant height at least 93 mm shorter than Scaldis (tables 1A, 1B).
- The panicle length of Firefly is at least 80 mm shorter than Scaldis (tables 1A, 1B).
- 4) The flag leaf characteristics; length, height and sheath length are all shorter for Firefly compared to Scaldis (tables 1A, 1B).
- 5) The leaf blade length and leaf blade sheath length of Firefly are shorter than Scaldis (tables 1A, 1B).
- 6) Firefly has a shorter lemma length and awn length compared to Scaldis (tables 2A, 2B).
- 7) Firefly expresses more plants with an oblong panicle shape compared to Scaldis (tables 3A, 3B).
- 8) Firefly has a higher frequency of plants with an open panicle compared to Scaldis (tables 3A, 3B).
- 9) Firefly produces fewer plants with a glaborous leaf sheath compared to Scaldis (tables 4A, 4B).
- 10) Firefly has more seeds per 1,000 mg compared to Scaldis (tables 4A, 4B).

Shade Tolerance	Scaldis	2	Heat	Scaldis	2
Drought	Scaldis	2	Disease*	Scaldis	2
:					

^{*} Specify each disease evaluated.

16. (Use additional sheets as required) ADDITIONAL DESCRIPTION:

Describe all characteristics that cannot be adequately described in the form above in Exhibit D. Comparative varieties should be used as may be appropriate, such as for disease. Append all comparative trial and evaluation data, including measured characters, environmental, and disease test.

A morphological nursery designated 03PVPFRR was established in September 2003, in Albany, Oregon. Experimental design consisted of 5 entries; 4 replications per entry; 20 plants per replication; for a total of 80 plants per entry. Biljart, SR 3000, and Scaldis were used as standards. Plants were established on 2.5 foot centers with a skip row between replications and between entries.

The nursery received 30 pounds of nitrogen per acre rate following establishment and 50 pounds of nitrogen per acre per year in 2004 and 2005. The fertilizer source was 15 - 15 - 15 and was applied as a split application with ½ applied in the spring and ½ in the autumn. The nursery was sprayed twice each spring, 3 weeks between applications, with Quilt (20z/acre rate), to prevent stem rust. One pound of Karmex per acre rate was applied during the late summer to prevent emergence of volunteer

Data was analyzed using analysis of variance for a randomized complete block design. Means were calculated for each replication and then analyzed for tables 1A, 1B, 2A, and 2B.

Tables 3A, 3B, 4A, 4B, 5A, and 5B data were analyzed using binary data confidence intervals. The confidence intervals are given for the characteristics which expressed significant differences.

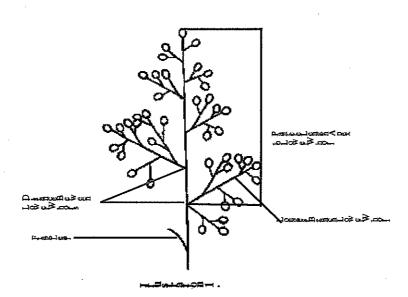

Exhibit D:

Additional Description

Firefly Hard Fescue

Firefly has improved characteristics over current cultivars, such as Scaldis. The heading date and anthesis date of Firefly is later compared to Scaldis, Biljart and SR 3000 (tables 1A, 1B). Firefly is a more compact cultivar compared to Scaldis (tables 1A, 1B) with the mature plant height shorter than Scaldis and SR 3000. The panicle length of Firefly is also reduced compared to Scaldis, Biljart, and SR 3000 (tables 1A, 1B). The glume length of Firefly is longer compared to Biljart (tables 2A, 2B). The length of the longest branch of the lower most whorl is shorter for Firefly compared to Scaldis, Biljart, and SR 3000 (tables 2A, 2B).

Firefly may be differentiated from Scaldis on several visual characteristics. Firefly exhibits a lower frequency of plants with a nodding panicle orientation compared to SR 3000 (tables 3A, 3B). Firefly exhibits a higher frequency of plants with an oblong panicle shape and an open panicle type compared to Scaldis, Biljart, and SR 3000 (tables 3A, 3B). The frequency of glabrous leaf sheath surface hairs is less for Firefly than Scaldis and SR 3000 (tables 4A, 4B). Firefly produces more plants with a distinct node pigmentation compared to Biljart (tables 4A, 4B). The weight of 1,000 seeds of Firefly is greater than Biljart and Scaldis (tables 4A, 4B). Firefly performs better in turf compared to Jamestown II, Reliant II, Minotaur, and Stonehenge (table 6).

9. Is the applicant (individual or company	/) a U.S. national or	r a U.S. based company	/? If no, give name of o	-		
				⊠ YES		□ _{NO}
10. Is the applicant the original owner?			If no, pleas	e answer <u>one</u> of t	he following:	
	⊠ _{YES}	\square NO				
a. If the original rights to variety were			Lowner(s) a U.S. Nation	al(s)?		
,,	⊠ _{YES}	□ _{NO}		name of country		
		<i>*</i> • • • • • • • • • • • • • • • • • • •				No.
b. If the original rights to variety were		_	ginal owner(s) a U.S. bas	ed company?		
	⊠ YES	⊔ NO	If no, give	name of country		
11. Additional explanation on ownership	(If needed, use the	reverse for extra space	e);			
•						
•						
PLEASE NOTE:						
Plant variety protection can only be afford	led to the owners (r	not licensees) who mee	t the following criteria:			
If the rights to the variety are owned by national of a country which affords sim	the original breede	er, that person must be	a U.S. national, national	of a UPOV membe	er country, or	
If the rights to the variety are owned by nationals of a UPOV member country,	the company which	h employed the original	preeder(s), the compan	must be U.S. bas		enus and species.
3. If the applicant is an owner who is not t	the original owner, I	both the original owner	and the applicant must r	neet one of the abo	ve criteria.	
The original breeder/owner may be the inc	dividual or company	who directed the final	breeding. See Section 4	1(a)(2) of the Plant	Variety Protection	Act for definitions.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, sexual orientation, or marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) Should contact USDA's TARGET Center at 202-720-2600 (voice and TDD). To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call 202-720-5964 (voice and TDD). USDA is an equal opportunity provider and employer.

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a aperson is not required to respond to a collection of information unless it desplays a valid OMB control number. The valid OMB control number for this information collection is 0581-0055. The time required to complete this information collection is estimated to average 3.0 hours per response, including the time for reviewing instructions, searching exsisting data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information
